

LP2951

Adjustable Micro Power Voltage Regulator

Features

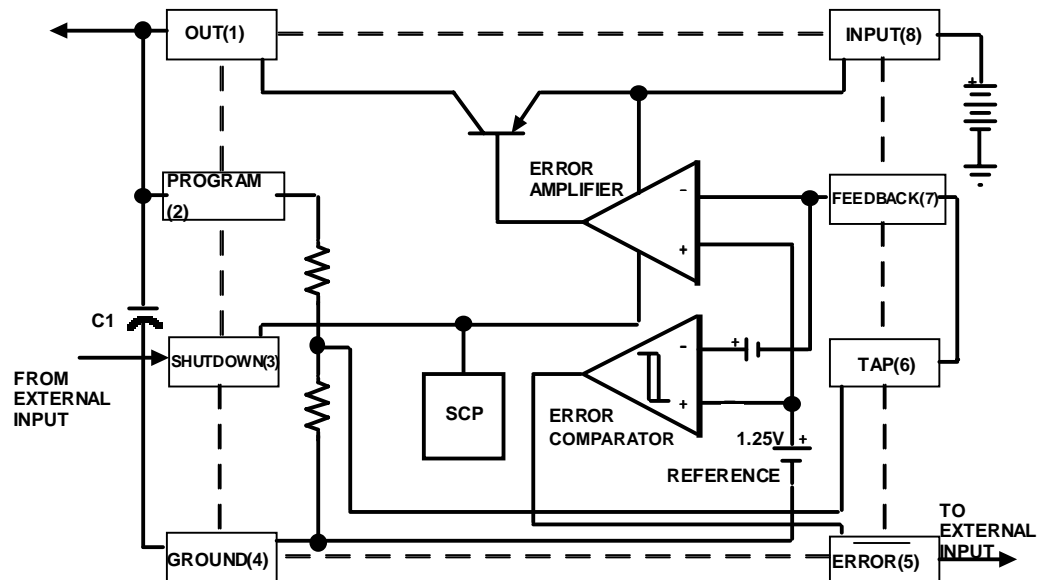

- Low Quiescent Current
- Low Dropout Voltage
- Low Temperature Coefficient
- Tight Line and Load Regulation
- Guaranteed 100mA Output Current
- Internal Short Current & Thermal Limit
- Error Signals of Output Dropout (8 pin Versions Only)
- External Shut-down (8 pin Versions Only)

Description

The LP2951 is an adjustable micro power voltage regulator suitable for use in battery-powered systems. This regulator has various functions such as alarm which warns of a low output voltage, often due to falling batteries on the input, the external shutdown which enables the regulator to be switched on and off, current and temperature limiting.

| | | $V_{SD} = 28V$ | - | 450 | 750 | μA |

Note :

- Output or reference voltage temperature coefficient is defined as the worst case voltage change divided by the total temperature range.
- Regulation is measured at constant junction temperature , using pulse testing with a low duty cycle.
- $V_{ref} \leq V_{out} \leq (V_{in} - 1V)$, $2.5V \leq V_{in} \leq 28V$, $100\mu\text{A} \leq I_L \leq 100\text{mA}$, $T_A \leq T_{AMAX}$.
- Threshold and hysteresis are expressed in terms of voltage differential at the Feedback terminal below the normal reference . To express these thresholds in terms of output voltage change , multiply by the error amplifier gain = $V_O / V_{REF} = (R1 + R2) / R2$.
- $V_{shutdown} \leq 0.6\text{ V}$, $V_{OUT} = \text{ON}$, $V_{shutdown} \geq 2.0\text{ V}$, $V_{OUT} = \text{OFF}$.

Typical Application

$$V_O = V_{REF} (1 + R_1 / R_2) + I_{FB} R_1$$

CO is required between the output and ground for stability at output voltages of 5V or more. since IFB is controlled to less than 40nA, the error associated with this term is negligible in most applications. At lower output voltage, more capacitance is required. without this capacitance the part will oscillate.
